INCIDENT LIFE CYCLE AUTOMATION

Solution Architecture

Layered architecture aligned to the incident lifecycle

STUDENT NAME **Shanmugapriya M**	PROJECT **Incident Life Cycle Automation**
DOCUMENT DATE **08 October 2026**	SCOPE **Incident lifecycle workflow & automation only**

Layer	Responsibility	Project Components
Presentation	Collect input and show lifecycle state	Incident form, incident detail, dashboard, filters, timeline
Application & Automation	Apply lifecycle rules and trigger automated actions	Validation, triage, routing, status transitions, SLA checks, escalation
Data	Persist operational and audit information	Incidents, users/roles, status history, SLA events, audit log
Runtime	Run scheduled checks and message delivery	Scheduler/background worker, notification service

Architecture Principle

Keep user interaction, lifecycle logic, persistent data and scheduled automation separated so the project remains understandable and maintainable.
