INCIDENT LIFE CYCLE AUTOMATION

Customer Journey Map

End-to-end experience from issue reporting to closure

STUDENT NAME **Shanmugapriya M**	PROJECT **Incident Life Cycle Automation**
DOCUMENT DATE **08 October 2026**	SCOPE **Incident lifecycle workflow & automation only**

Stage	User Action	Need	Pain Point	Automation Opportunity	Outcome
1. Notice	Problem occurs	A clear reporting path	Uncertainty about where to start	Direct incident entry	Incident starts
2. Report	Submit details	Fast, structured input	Missing information	Validation + incident ID	Incident logged
3. Ownership	Wait for handling	Know who owns it	Manual hand-off delay	Rule-based assignment	Owner visible
4. Progress	Check status	Current information	Silent progress	Timeline + status updates	Progress visible
5. SLA Risk	Incident approaches due time	Early intervention	Late follow-up	SLA monitor + escalation	Action triggered
6. Resolve	Issue is fixed	Record the solution	Closure details may be missed	Resolution validation	Resolved
7. Close	Complete final action	Traceable history	Evidence may be scattered	Audit trail + closure	Closed with history

Journey Goal

Make the next lifecycle step visible and automate repeatable decisions without expanding beyond incident management.
